Lab No. 8 – Form Processing using Django – Part-1 (HomeWork)

Additional

Develop a Web Application for Grocery Checklist Generation as shown in the figure below. It must have checkboxes which must be populated on page load listing grocery items. On clicking the Add Item button the selected Items and their prices have to be displayed in a Table. Set the borderstyle and border width for the table and its cells.

Urls.py

```
from django.urls import path
from . import views

urlpatterns = [
    path("", views.grocery_list, name='grocery_list'),
]
```

Urls.py

```
from django.contrib import admin
from django.urls import path, include

urlpatterns = [
    path('admin/', admin.site.urls),
    path("", include('grocery.urls')),
]
```

Views.py

```
from django.shortcuts import render
from .forms import GroceryForm

# Grocery items with prices
GROCERY_PRICES = {
    'Wheat': 40,
```

```

'Jaggery': 60,
'Dal': 80,
'Rice': 50,
'Sugar': 45,
}

def grocery_list(request):
    selected_items = []
    if request.method == 'POST':
        form = GroceryForm(request.POST)
        if form.is_valid():
            items = form.cleaned_data['items']
            for item in items:
                selected_items.append({
                    'name': item,
                    'price': GROCERY_PRICES[item]
                })
